

ARIS STATIONERIES — Marketplace API

Partner Integration Guide (v1.0)

This document describes how to sync the ARIS Stationeries product catalog into your marketplace (Jumia, Kilimall, etc.). The API is read-only and returns JSON.

1. Base URL

`https://ryiwclzfoctbgmkhgept.supabase.co/functions/v1/marketplace-api`

2. Authentication

Every request must include your issued API key in the header:

X-API-Key: aris_live_XX

Keep this key private. If it leaks, notify ARIS and it will be revoked and re-issued.

3. Endpoints

GET /products — Paginated catalog. Query: page (default 1), per_page (max 200), category, updated_since (ISO date).

GET /products/{id_or_slug} — Single product with media and variants.

GET /categories — All product categories.

GET /stock — Lightweight stock feed: id, slug, stock, updated_at. Use for periodic inventory sync.

4. Example requests (curl)

```
curl -H "X-API-Key: YOUR_KEY" "https://ryiwclzfoctbgmkhgept.supabase.co/functions/v1/marketplace-api/products?page=1&per_page=50"
curl -H "X-API-Key: YOUR_KEY" "https://ryiwclzfoctbgmkhgept.supabase.co/functions/v1/marketplace-api/products/slug/parker-jotter-blue"
curl -H "X-API-Key: YOUR_KEY" "https://ryiwclzfoctbgmkhgept.supabase.co/functions/v1/marketplace-api/categories"
curl -H "X-API-Key: YOUR_KEY" "https://ryiwclzfoctbgmkhgept.supabase.co/functions/v1/marketplace-api/stock"
```

5. Product response shape

```
{
  "partner": "Your Company",
  "page": 1,
  "per_page": 50,
  "total": 87,
  "data": [
    {
      "id": "uuid",
      "slug": "parker-jotter-blue",
      "name": "Parker Jotter Ballpoint",
      "description": "...",
      "category": "Pens",
      "image_url": "https://.../image.jpg",
      "price": 850,
      "original_price": 1000,
      "on_sale": true,
      "currency": "KES",
      "stock": 24,
      "in_stock": true,
      "product_url": "https://arisstationaries.co.ke/product/parker-jotter-blue",
      "updated_at": "2026-07-01T10:22:00Z"
    }
  ]
}
```

6. Sync recommendations

- Full catalog import: call /products paginated until data is empty.
- Incremental: store the last sync timestamp and call /products?updated_since=ISO every 15–60 min.
- Inventory only: poll /stock every 5–15 min for fast stock updates.
- Always link back to product_url when listing on your marketplace.

7. Errors

401 = missing/invalid/revoked key. 404 = unknown product or endpoint. 500 = server error, retry with backoff.

8. Contact
